

# Reach for the sky!

It's easy and safe with the non-slip strips

sangrip

# sangrip

## No time for slip-ups!

### A small piece of great innovation

sangrip solves stacking problems the smart way:

- prevents slipping
- quick and easy to use
- simple to apply
- economic and durable
- saves time and money
- in a handy dispenser
- food-safe
- impervious to moisture
- 100% recyclable

For stacking, transport and storage: The sangrip non-slip strip provides amazing grip for anything that might start to slide on its own.

The strip fits and sits perfectly wherever grip is required: between smooth surfaces and on uneven edges. Every strip is surprisingly light and easy to use and avoids the need for complicated safety materials.

A minor application for a major effect - sangrip prevents unstable items from slipping during transport: simply and quickly.

## Just the right setting for your packages!

With sangrip you have the assistant you've always been looking for. So why has nobody thought of it before, you may ask? Just because the best ideas need a perfect basis. With its innovative features, sangrip shows how easy progress can be:

- Mixed polymer film
- Width: 137mm,
- perforated for easy separation: 300 mm
- dynamic friction coefficient (film-cardboard)  $\geq 0.7$

## ... sangrip stops things

With sangrip you can stack them as high as you like – even with difficult routes and packages. A small strip with a great effect:

slipping!

- + **The safety benefit: high, smooth stacks of parcels are no longer a potential danger.**
- + **The time benefit: fast and easy to use.**
- + **The quality benefit: products remain in perfect shape without damage from slipping.**
- + **The environmental benefit: the need for complicated transport packaging is reduced.**

On a slippery slope ...

Smooth surfaces, unevenly sized parcels and then sloping routes in the warehouse:

Transport conditions like these offer great potential for slippage. Products and materials that are not securely stowed can get damaged. Transportation becomes a risk for goods and people. Complicated safety devices in internal logistics areas are no solution, for reasons of time and equipment. But without a solution valuable products start to slide, people are in danger and deadlines slip too.

sangrip and sanstrap stretchbands are the ideal combination  
for all internal transport and logistics processes.
